MARKER PROTECTORS

KEY FEATURES

MULTILAYER WOODCORE

Each model contains a unique core that is individually attuned to its intended use and the expected stresses. We differentiate between a broad range of woods, composites and hybrids based on their construction, thickness profile, stiffness and flex behavior.

ROCKER CONSTRUCTION

Our Rocker construction is directly integrated into the production cycle, so the rocker shape doesn't need to be bent afterwards, which makes the matching between the rocker and the other components much more harmonized and precise.

FINISH

We are differentiating between several different finishes for each ski to find the perfect set up for each discipline. Our skis can be used directly on the racing course without any further preparation.

INTERFACE + XCOMP

The Marker World Cup Plate works with an hydraulic oil piston, which enables sensational performance on the race track. The piston only reacts to negative ski impacts. This noticeably improves the turn initiation, increases the edge grip and allows more precisely control. Combined with a Marker Xcomp Binding, power transmission, control and precision are incredible without any compromises on protection.

PERFECT SETUP

The VÖLKL PERFECT SETUP is an extremely complex process in optimizing all ski components, both individually and in relation to one another. This means: Each ski is unique in its own structure and performance.

KEEP ON RACING

HIGHTECH
MADE WHERE WE LIVE AND SKI:
BAVARIA, GERMANY

UVO.3D

1 Horizontal damping function

// building up tip pressure earlier
// rapid inclination invites the skier to move fast further inside

2 The enhanced vertical function increases damping effect

// significantly reduced vibration amplitudes
// a new level of reliability at extreme edge angles

BOOTBOARD TUNING OPTIONS

Stance can be adjusted by grinding the boot board: different heights allow different performance characteristics depending on the athlete's needs. In the heel area there are two holes with two different depths. Grinding one or two steps it is possible to vary the bootboard's inclination, in proportion to the developments in the series. If you polish inside the reference area, you get an excellent set up, without margin of error.

NEW BUCKLES & DEDICATED BASE PLATES

New DRS buckles are 3D shaped, to better follow the ergonomic shape of the boot & for precise buckle tension on the new DRS, specifically dedicated for each size and position.

NEW SOLE ARCHITECTURE & REBALANCED HEIGHT IN COMPLIANCE WITH ISO NORM

Out of the box, the sole dimensions on the heel and toe are in compliance with ISO 5355. The new DRS is also within the F.I.S. stand height regulation of 43 mm.

KEY FEATURES

SLIM & COMPACT SHAPE WITH TWO NEW LASTS

LAST 92: With one of the most exacting lasts on the market, at 92 mm the DRS WC brings the power closer to the sole of the foot for more consistent and direct transmission of energy.

LAST 97: The shape of the DRS in the 97 mm last offers a perfect combination of the precision and performance of WC boots with the opportunity to enjoy the entire day of skiing without pressure points or pain. The DRS wraps the entire shape of the foot allowing complete and direct power transmission.

NEW LIFTERS & CANTING SOLES

You can install a pair of lifters with the height of 5 mm (or even 3mm for the WC version). After the installation, boot toe and heel heights must be routed to restore the original height dimensions.

For the new DRS 97 lifters are available after-market and offer more grip than the WC version. In addition, GripWalk is now available on even the highest performing Dalbello models! With the option of mounting special GripWalk lifters, the DRS 97 mm last can be upgraded with more grip and better walking comfort with no loss of performance.

FLEX & CUFF COMBINATIONS

The stronger the athlete is, the harder the plastic of his boot is. Stiffer materials allow a direct transmission of the forces to the ski. Size by size the wall plastic thicknesses change according with the entire volume and construction of the boots. This is the reason why the same flex letter on the smallest sizes are softer than the biggest sizes.

NEW LINERS & TONGUE

The new WC liners are made with the highest quality materials to maximize feel and optimal vibration absorption.

- Velcro spoiler 1
- New collar 2
- WC lining & padding material 3
- Lorica outer tomaia 4
- Reinforced tongue double option to customize 5
- Tongue after customization 6

MARKER

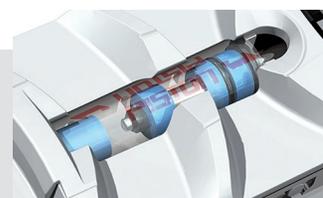

XCOMP TOE

- One piece attachment with three point mounting pattern
- Absorbers in main body provide a more forgiving performance
- Xcomp piston absorbs short initial impacts and keeps boot centered
- Great power transmission, precision and control

TCX HEEL

- Increased vertical energy absorption
- Increased boot lug purchase
- Wider Heel connection
- Better power transmission

PISTON CONTROL

The inner life of the World Cup Plate. A hydraulic oil piston enables sensational performance on the race track. The piston only reacts to negative ski impacts. This noticeably improves the turn initiation, increases the edge grip and allows more precisely controlled turns.
